### Investment managers

Tiger Inc.1998, 100%

### Total investment charges (%)

Total Investment Management Charges (TIC)	2.31
Total Expense Ratio (TER)	1.87
Performance Fee	0.00
Transaction Costs (TC)	0.44

**Costs reflected are quarterly in arrears.**

**TER:** Expenses relating to the administration of the Financial Product. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not be necessarily an accurate indication of future TERs.

**TC:** Transaction costs are a necessary cost in administering the Financial Product returns.Costs relating to the buying and selling of the assets underlying the Financial Product.

**TIC:** should be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

### Equity sector breakdown

### Quarterly commentary

Markets generally experienced some consolidation and correction during September but delivered positive quarterly returns. The JSE/FTSE ALSI Top40 performance for the quarter was somewhat pedestrian returning 0.72%. Most local market sectors delivered lackluster or negative performance as both political and economic uncertainty continued to undermine investor confidence. Overall market performance was fortunately supported by rallies in both gold and platinum counters which both attracted increased demand.

The Resources sector returned 5.71% for the quarter and was by far the best performer. Financials managed to muster a positive return of 0.47% despite having come under repeated selling pressure. The Industrial sector eased as Naspers sold off in line with global tech stocks delivering a negative -2.29% for the quarter. The Property sector came in for a hammering as work from home became the accepted norm and declined a negative -14.14%.

### Mandate compliance

The fund remains within the reporting regime as at the date of this report.

### Disclaimer

This is a minimum disclosure document and general investor report. Collective Investment Schemes are generally medium to long term investments. The value of participatory interests may go down as well as up. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio. Past performance is not necessarily an indication of future performance. CIS's are traded at ruling prices and can engage in borrowing and scrip lending. Different classes of units apply to these portfolios and are subject to different fees and charges. The charges for the most expensive class [Class B] have been disclosed in the Total Investment Charges. A schedule of fees and charges and maximum commissions is available on request from the manager. The manager has a right to close portfolios to new investors in order to manage them more efficiently in accordance with their mandates. Forward pricing is used. The manager may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Actual investment performance will differ based on the initial fees applicable, the actual investment date and the date of reinvestment of income. Dealing prices are calculated on a net asset value and auditor's fees, bank charges and trustee fees are levied against the portfolios. Performance is calculated for the portfolio, as well as that the individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Recurring investment or lump sum investment performances are quoted. Income distributions are included in the calculations. Performance numbers and graphs are sourced from GTC. NAV to NAV figures have been used. The investment performance is for illustrative purposes only. The investment performance is calculated after taking the actual initial fees and all ongoing fees into account. The reinvestment of income is calculated on the actual amount distributed per participatory interest by using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual reinvestment date. The portfolio charges a performance fee that is calculated as follows:  $PF = PR * (PC - FH)$  where PR = the rate of participation, PC = the daily return of the GTC Equity Fund and FH = the fee hurdle. If the GTC Equity Fund return ("PC") is less than the fee hurdle ("FH") then any shortfall will be carried forward to the next calculation period for set-off against future excesses. The GTC Equity Fund Class B charges an annual service fee of 1.06% (excluding VAT).

The Risk profile of the portfolios ranges from low risk to high risk with a low risk portfolio potentially associated with lower rewards and a high risk portfolio with potentially higher rewards. This portfolio has a high risk profile. It is suitable for long term investment horizons. It has full exposure to the local equity market. Where the asset allocation contained in this MDD reflects offshore exposure, the portfolio may be exposed to the following risks: potential constraints liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks and potential limitations on the availability of market information. The portfolio is exposed to equity as well as default and interest rate risks. The probability of losses is higher than that of a moderate risk portfolio, but less than a high- risk portfolio. The portfolio is subject to market or systematic risk which is the possibility of the portfolio experiencing losses due to factors that affect the overall performance of the financial markets.

Definition of the terms used to measure the risk in the portfolios a) Tracking Error: tracking error or active risk is a measure of the risk in an investment portfolio that is due to active management decisions made by the portfolio manager; it indicates how closely a portfolio follows the index to which it is benchmarked and b) Standard deviation: is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk. One can also obtain additional information on GTC products on the website and all price related queries or information is readily available on request. Fund of funds are portfolios that invests in portfolios of collective investment schemes that levy their own charges, which could result in a higher fee structure for the fund of funds. The daily cut off time is 14:00 for trades and the valuation point is 17:00. Prices are published on Finswitch by 10:00 daily. GTC Management Company (RF) (Pty) Ltd is registered as a Collective Investment Scheme Manager in terms of Section 5 of the Collective Investment Schemes Control Act and is a member of ASISA.
