Investment mandate and objectives

The primary investment objective of the Fund is to generate real positive returns over time through the active management of a combination of money market, bond and income generating instruments. The strategy and investment mandate of the fund has a focus on income generation, with downside protection of capital.

Features:

The fund will primarily invest in a range of fixed income securities including instruments guaranteed by the Republic of South Africa, gilts, semi-gilts, loan stock, preference shares, debentures, debenture stock, debenture bonds, unsecured notes, financially sound listed property investments, participatory interest in collective investment schemes and any other instruments guaranteed by the Republic of South Africa which are considered consistent with the fund's primary objective. Taquanta Asset Management is our preferred investment manager mandated to achieve the above investment objectives.

Market summary

- The Local equity market ended the month of April in the green, up +3.4% as Property (+5.4%), Resources (+4.2%), Financials (+3.3%), and Industrials (+3.1%) all rallied after a volatile March. While fears amid the impact of a slowdown in global trade and the international banking crisis remains, markets seemed to have settled somewhat during April.
- South Africa's inflation rate remains persistently high at 7.1% for the year ended April 2023. This represents an increase over the year ended March 2023 inflation print and increases the likelihood that the South African Reserve Bank will hike interest rates in May 2023 should inflation not abate meaningfully.
- The local bond market (ALBI) contracted -1.1% for the month behind local cash (STEFI) at +0.6%.
- Developed equity markets ended the month up +1.8% in US dollar terms propelled by better than expected US corporate earnings, while Emerging equity markets detracted some -1.1% in US dollar terms. The Rand weakened further some 3% to R18.4 towards month-end, providing a tailwind to the overall Rand based returns for both these global equity markets.
- As market volatility and economic uncertainty continue to be persistently elevated over the month, GTC remains cautious in our portfolio positioning as we navigate through this market cycle.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
