Rolling returns (%)

Time Period: 01/08/2016 to 31/07/2023

Rolling Window: 3 Years 1 Month shift

Investment mandate and objectives

The portfolio employs a rule based (passive) investment strategy. The objective of this portfolio is to outperform a full risk composite benchmark over a rolling 10-year period. This portfolio has been designed for maximum capital growth through a combination of local and offshore asset exposure. The portfolio's offshore exposure provides diversification, higher return potential and protects against local currency depreciation.

Features:

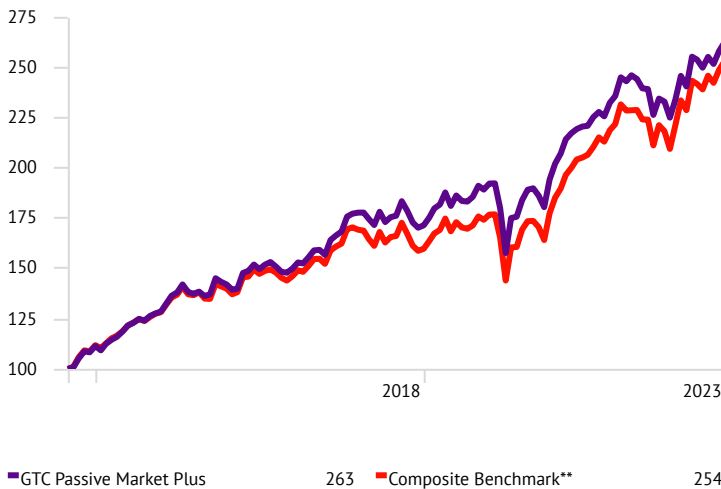

- Regulation 28 compliant
- Full equity exposure
- Local and international exposure
- Capital growth

Market summary

- The South African Reserve Bank left its key repo rate unchanged at a 14-year high of +8.25% during its July 2023 meeting. The central bank however warned that the decision did not mark the end of the hiking cycle, stating that the committee would continue to monitor inflationary pressures.
- Local equities ended the month up 4.1%, with all sectors contributing positively. Financials earned +7.9%, driven primarily by Capitec and ABSA. Resources were up 3.7%, benefiting from a recovery in platinum group metals (PGMs), while Industrials (+2.6%) and listed Property (+2.3%) ended the month positive as well.
- Local cash gained 0.7% behind local bonds over the month which earned 2.3% amid strong demand for SA bonds given the attractive yield on offer.
- The slightly increased risk on sentiment contributed to the outperformance of Emerging Market equities (+6.2% USD) over its Developed Market equity (+3.4% USD) counterpart. Local equities outperformed both offshore markets in ZAR terms as the rand strengthened 5.9% against the dollar over the month.
- In its July 2023 Federal Open Market Committee meeting, the US Federal Reserve recommenced tightening of monetary policies, following a pause in June 2023, with a 25bps increase in interest rates taking the benchmark rate to 5.5%.
- The European Central Bank mirrored the US Fed by implementing a 25bps rate increase and emphasised that they would continue to assess incoming data to inform future rate decisions.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
