Investment mandate and objectives

This is a higher risk portfolio which has a direct market focus as opposed to an inflation targeting strategy. The objective of this portfolio is to outperform a market benchmark portfolio, constructed using market indices, over rolling 10 year periods. This portfolio has been designed for capital growth through direct market exposure, accepting that there will be periods of greater volatility and market shocks from time to time. The portfolio has exposure to both local and offshore assets. The portfolio will have international equity exposure which offers diversification and a local currency hedge.

Features:

- Regulation 28 compliant
- Local and international exposure
- Multi-asset class exposure
- Maximum equity exposure

Fund facts:

Multi manager: GTC
Benchmark: Composite Benchmark**
Risk profile: High Risk

Market summary

- The BRICS summit held in South Africa confirmed the extension of its membership to Argentina, Egypt, Ethiopia, United Arab Emirates, Saudi Arabia and Iran.
- Local equities ended the month in the red, down -4.8% as all major sectors produced negative returns. Resources experienced the most significant decline (-9.6%), primarily due to the weak performance from Gold and PGM (Platinum Group Metals) counters. Industrials declined -4.7% while Financials detracted -1.8%. Local property earned a positive +0.9% return, ahead of the local equity market.
- Local cash gained a return of 0.7% and is up by 5.1% year to date while the local bond were slightly negative (-0.2%) amid the risk off sentiment over the month.
- On the back of elevated inflation, the Bank of England implemented its 14th consecutive interest rate hike, increasing the policy rate by 0.25% to reach 5.25% in August 2023.
- Emerging Market equities fell -6.1% USD and Developed Market equities detracted -2.4% USD over the month driven by ongoing weakness in China's economy and concerns that strength in the US economy will keep interest rates higher for longer.
- Adding to global market concerns, the credit rating agency Fitch, downgraded the US Government's credit rating from AAA to AA+, citing unsustainable debt and increased political dysfunction.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
