Rolling Window: 1 Year 1 Month shift

## Investment mandate and objectives

The primary investment objective of the Fund is to generate real positive returns over time through the active management of a combination of money market, bond and income generating instruments. The strategy and investment mandate of the fund has a focus on income generation, with downside protection of capital.

### Features:

The fund will primarily invest in a range of fixed income securities including instruments guaranteed by the Republic of South Africa, gilts, semi-gilts, loan stock, preference shares, debentures, debenture stock, debenture bonds, unsecured notes, financially sound listed property investments, participatory interest in collective investment schemes and any other instruments guaranteed by the Republic of South Africa which are considered consistent with the fund's primary objective. Taquanta Asset Management is our preferred investment manager mandated to achieve the above investment objectives.

## Market summary

- Local equities ended the month with a return of -2.9%, as all sectors produced negative returns. Industrials experienced the largest decline of -4.5%, as MTN sold off -19.4% over tax concerns in Nigeria. Resources with a return of -4.3% was a result of weak performance from platinum and diversified miners. The local property sector declined -3.0% over the month with the Financials sector down -2.2%.
- Local cash gained +0.7% over the month and +6.6% year to date ahead of local bonds which ended the month up +1.7% but the year to date up just +3.2%.
- Geopolitical tension remained elevated with the escalation of the Israel-Hamas conflict.
- Global markets weren't spared the pull-back. Emerging Market equities decline -3.9%. Investor sentiment towards China continued to weaken due to the country's economic slowdown and a perceived lack of a convincing response from the Chinese government. The ongoing property debt crisis has also added to investor concerns.
- Developed Market equities came off -2.9% for the month. U.S. inflation remains elevated with the Federal Reserve Chair Jerome Powell indicating that further tightening is not ruled out, contingent on incoming data. Meanwhile, the European Central Bank maintained its key interest rates in October.

## Glossary

### Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

### Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

### Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

### Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
