Investment mandate and objectives

This is a higher risk portfolio which has a direct market focus as opposed to an inflation targeting strategy. The objective of this portfolio is to outperform a market benchmark portfolio, constructed using market indices, over rolling 10 year periods. This portfolio has been designed for capital growth through direct market exposure, accepting that there will be periods of greater volatility and market shocks from time to time. The portfolio has exposure to both local and offshore assets. The portfolio will have international equity exposure which offers diversification and a local currency hedge.

Features:

- Regulation 28 compliant
- Local and international exposure
- Multi-asset class exposure
- Maximum equity exposure

Fund facts:

Multi manager: GTC
Benchmark: Composite Benchmark**
Risk profile: High Risk

As of 31/12/2023

Market summary

- Local equity markets ended the month up +2.9%, on the back of a 5.5% rally in the Financials sector and a +9.9% rally in the listed property sector. Industrials were slightly positive with +0.7% while the Resources sector contracted -1.3%.
- South African headline inflation (CPI) slowed to +5.5% in November 2023, down from +5.9% a month earlier.
- The local bond market (ALBI) delivered +1.5% for the month ahead of local cash (STEFI) at +0.7%.
- Developed market equities (+4.9%) outperformed emerging market equities (+3.9%) over the month in US dollar terms. The dollar weakened -2.9% relative to the rand, detracting from offshore assets' rand-based return.
- As market volatility and economic uncertainty remain elevated, GTC remains cautious in our portfolio positioning as we navigate through this market cycle.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
