As of 31/12/2023

Market summary

- Local equity markets ended the month up +2.9%, on the back of a 5.5% rally in the Financials sector and a +9.9% rally in the listed property sector. Industrials were slightly positive with +0.7% while the Resources sector contracted -1.3%.
- South African headline inflation (CPI) slowed to +5.5% in November 2023, down from +5.9% a month earlier.
- The local bond market (ALBI) delivered +1.5% for the month ahead of local cash (STEFI) at +0.7%.
- Developed market equities (+4.9%) outperformed emerging market equities (+3.9%) over the month in US dollar terms. The dollar weakened -2.9% relative to the rand, detracting from offshore assets' rand-based return.
- As market volatility and economic uncertainty remain elevated, GTC remains cautious in our portfolio positioning as we navigate through this market cycle.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
