Investment mandate and objectives

The portfolio employs a rule based (passive) investment strategy. The GTC Passive One fund comprises of both local and international asset classes, with a low exposure to equities. The fund is Regulation 28 compliant and aims to outperform inflation plus 1% over rolling 3 year periods, with no negative rolling 12 month period. The portfolio has been designed for capital protection through reduced volatility.

The portfolio utilizes asset allocation and downside protection to deliver consistent positive returns through most market conditions. The portfolio has international exposure of between 15% and 20%, which offers diversification and a local currency hedge.

Features: Regulation 28 compliant

GTC Passive One

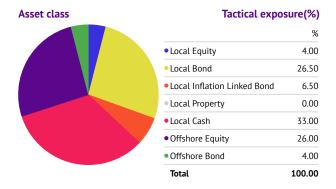

As of 31/12/2023

Market summary

- Local equity markets ended the month up +2.9%, on the back of a 5.5% rally in the Financials sector and a +9.9% rally in the listed property sector. Industrials were slightly positive with +0.7% while the Resources sector contracted -1.3%.
- South African headline inflation (CPI) slowed to +5.5% in November 2023, down from +5.9% a month earlier.
- The local bond market (ALBI) delivered +1.5% for the month ahead of local cash (STEFI) at +0.7%.
- Developed market equities (+4.9%) outperformed emerging market equities (+3.9%) over the month in US dollar terms. The dollar weakened -2.9% relative to the rand, detracting from offshore assets' rand-based return.
- As market volatility and economic uncertainty remain elevated, GTC remains cautious in our portfolio positioning as we navigate through this market cycle.

Glossary

Standard deviation

• Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

• Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

• Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

• Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
