

As of 31/01/2024

## Rolling returns (%)

Time Period: Since Common Inception (01/09/2015) to 31/01/2024

Rolling Window: 3 Years 1 Month shift

## Investment mandate and objectives

The objective of this portfolio is to outperform the CPI + 1% target over rolling 3 year periods with a reduced probability of negative returns over rolling 12-month periods. The portfolio has been designed for capital protection through reduced volatility. The portfolio has exposure to both local and offshore assets. The portfolio utilizes asset allocation and downside protection to deliver consistent positive returns through most market conditions.

**Features:**

- Regulation 28 compliant
- Local and international exposure
- Multi-asset class exposure
- Capital preservation

## Fund facts:

**Multi manager:** GTC  
**Benchmark:** CPI + 1% over 3 year rolling periods  
**Risk profile:** Low Risk

## Longest history cumulative performance (%)

Time Period: Since Common Inception (01/09/2015) to 31/01/2024

## Market summary

- Local equities ended the month with a negative return of -2.8%. Industrials declined -1.2% with Financials, influenced by weakness in major banking counters such as Firstrand (-7.6%) and Standard Bank (-4.0%), which dropped -2.9%. Resources experienced the largest detraction (-5.9%) due to weak performance from energy and platinum counters, with Sasol (-11.4%), Thungela (-22.0%), Anglo American Platinum (-17.3%) and Impala Platinum (-19.8%). The local property sector continued its recovery, up +4.1% over the month.
- In January, South African manufacturing activity experienced a decline with the Absa Purchasing Managers' Index (PMI) falling 43.6 points in January from 50.9 in December, dropping below the 50-point threshold which signifies contraction in the sector. The decrease was largely due to a decline in new sales orders, an indicator of demand.
- Both local cash and bonds earned +0.7% for the month. The US Federal Reserve (Fed) decided to keep interest rates on hold with a range of 5.25% to 5.50%. Concerns around a higher for longer interest rate environment globally has kept markets on uneven footing.
- Developed Market equities returned +1.2% for the month ahead of Emerging Market equities -4.6%. Emerging Markets came under pressure amid global trade concerns. The Chinese equity market sold-off over the month amid poor stimulus from their central bank and concerns over their property sector after a Hong Kong court ordered the liquidation of the Evergrande Group. The repercussions of Evergrande's collapse on investors, debt holders and the numerous homebuyers who have already paid deposits remains uncertain.

## Glossary

### Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

### Maximum drawdown

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

### Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

### Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
