Quarterly commentary

- Over the quarter, global developed market equities rallied +11.4%, well ahead of emerging market equities +7.9% in
 US dollar terms. The US dollar's -2.6% weakness relative to the rand, detracted from offshore assets' rand-based
 return over the quarter.
- The South African Reserve Bank (SARB) kept interest rates unchanged at +8.25% over the quarter as headline inflation (CPI) fluctuated, ending the quarter at +5.5%.
- Over the quarter, the US FED kept interest rates unchanged at 5.5% as US headline inflation came in at +3.1%, in line with expectations.
- The local bond market (ALBI) delivered +8.1% for the quarter ahead of local cash (STEFI) at +2.1%. The Global Government Bond Index (WGBI) earned +8.1% over the quarter as yields retreated.
- Overall, global investor sentiment was mixed over the quarter. While the short-term outlook is still unclear, the longer-term picture remains positive. Nonetheless, GTC remains cautious in our portfolio positioning as we navigate through this market cycle.

Glossary

Standard deviation

• Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

• Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

• Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

• Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
