Investment mandate and objectives

The primary investment objective of the Fund is to generate real positive returns over time through the active management of a combination of money market, bond and income generating instruments. The strategy and investment mandate of the fund has a focus on income generation, with downside protection of capital.

Features:

The fund will primarily invest in a range of fixed income securities including instruments guaranteed by the Republic of South Africa, gilts, semi-gilts, loan stock, preference shares, debentures, debenture stock, debenture bonds, unsecured notes, financially sound listed property investments, participatory interest in collective investment schemes and any other instruments guaranteed by the Republic of South Africa which are considered consistent with the fund's primary objective. Taquanta Asset Management is our preferred investment manager mandated to achieve the above investment objectives.

Market summary

- Local Equities ended the month down -2.3%, driven by weak performance from the Resources sector (-7.2%), with Thungela (-12.4%), Sasol (-11.9%), Sibanye Stillwater (-13.2%), and Glencore (-9.2%) being the largest detractors over the month of February. While the Industrial (-0.7%) and Financial (-0.8%) sectors declined over the month, they outperformed the broad based local equity market index. Listed Local Property remained the best-performing local sector over the year thus far, up +0.8% for the month and 4.9% for the current year.
- Local Cash returned +0.7% over the month, ahead of Local Bonds which declined -0.6% as yields rose amid local and global risk factors.
- Inflation in South Africa rose to 5.3%, from 5.1% the previous month. The unemployment rate increased to 32.1% in the fourth quarter of 2023, from 31.9% in the previous quarter.
- The MSCI Emerging Markets Equity index recorded a +4.8% gain over the month, an improvement from the previous month's decline. The MSCI Developed Market Equity index rose +4.2% over the month as US economic indicators continued to show resilience.
- The Bank of England (BoE) maintained its interest rate at 5.25% for the fourth consecutive month during its first meeting of 2024. The European Central Bank is likely to keep interest rates on hold too during its upcoming review meeting.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
