GTC Passive Three

As of 31/03/2024

Market summary

- Local equity markets ended the month up +2.9%, on the back of a 15.4% rally in the Resources sector. Industrials were positive with +2.6% while the Financials and Listed Property sectors contracted -3.5% and -1.0% respectively.
- South African headline inflation (CPI) increased slightly to +5.6% in February 2024. While it remains within the reserve bank's target range of 3% 6%, we are trending towards the upper limit.
- The local bond market (ALBI) delivered -1.9% for the month well behind local cash (STEFI) at +0.6% amid an increase in yields.
- Developed market equities (+3.2%) outperformed Emerging market equities (+2.5%) over the month in US dollar terms. The dollar weakened -1.1% relative to the rand, detracting from offshore assets' rand-based return. In Rand terms, the local equity market outperformed both the Developed and Emerging equity markets.
- As market volatility and economic uncertainty remain elevated, GTC remains cautious in our portfolio positioning as we navigate through this market
 cycle.

Glossary

Standard deviation

• Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

• Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

• Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

• Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
