## Market summary

- Local equities ended the month up +2.9%. The Resource sector (+7.1%) continued its strong performance driven by Anglo American PLC (+32.6%). Financials rebounded in April ending the month up +2.7% driven by strong performance from banking counters such as Capitec (+11.1%) and Firstrand Ltd (+5.6%). The local Industrial sector is starting to see a rebound amid positive news out of China, specifically in the gaming sector affecting Tencent.
- SA property declined by -0.6% influenced by a pullback in heavyweight Nepi Rockcastle (-2.9%).
- The South African Chamber of Commerce and Industry (SACCI) business confidence index reached a high of 114.7 showing some stability in the sector despite challenging economic conditions. Headline inflation eased to 5.3% in March down from 5.6% in February, although it remained above the midpoint of the South African Reserve Bank's target range of 3% to 6%.
- Local bonds earned +1.4% as short term yields fell while local cash came in +0.7% for the month. The US Federal Reserve (Fed) maintained rates at a high of 5.5% for the sixth consecutive meeting. Concerns around a higher for longer interest rate environment globally has kept markets on uneven footing.
- Developed Market equities detracted -3.7% over the month, behind Emerging Market equities (+0.5%). China reported positive manufacturing and a GDP growth propelling its equity market up.

## Glossary

### Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

### Max drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

### Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

### Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
