As of 30/06/2024

Quarterly commentary

- The South African Reserve Bank (SARB) kept interest rates unchanged at +8.25% over the quarter as headline inflation (CPI) fluctuated, ending the quarter slightly up at +5.2%.
- The US Fed met twice over the quarter and in both cases, left the interest rate unchanged between +5.25% to +5.50%. The Bank of England also maintained its rate at +5.25% during its June meeting while European Central Bank cut interest rates by 25 basis points to +4.25% as widely expected, with inflation cooling to +2.5%.
- The Emerging Equity market index was up +5.0% over the quarter, outperforming the Developed Equity market index (+2.6%), both in US dollar terms. The Rand strengthened +3.8% against the greenback over the quarter detracting from Rand denominated offshore market returns.
- Overall, global investor sentiment was mixed over the quarter. While the short-term outlook is still unclear, the longer-term picture remains positive. Nonetheless, GTC remains cautious in our portfolio positioning as we navigate through this market cycle.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
