

As of 31/07/2024

## Rolling returns (%)

Time Period: Since Common Inception (01/09/2015) to 31/07/2024

Rolling Window: 3 Years 1 Month shift

## Investment mandate and objectives

The objective of this portfolio is to outperform the CPI + 1% target over rolling 3 year periods with a reduced probability of negative returns over rolling 12-month periods. The portfolio has been designed for capital protection through reduced volatility. The portfolio has exposure to both local and offshore assets. The portfolio utilizes asset allocation and downside protection to deliver consistent positive returns through most market conditions.

**Features:**

- Regulation 28 compliant
- Local and international exposure
- Multi-asset class exposure
- Capital preservation

## Fund facts:

**Multi manager:** GTC  
**Benchmark:** CPI + 1% over 3 year rolling periods  
**Risk profile:** Low Risk

## Longest history cumulative performance (%)

## Market summary

- South African manufacturing activity increased in July, driven by a rise in both domestic and global demand. The seasonally-adjusted PMI for the manufacturing sector rose to 52.4 points in July, up from 45.7 in June. The South African Reserve Bank's Monetary Policy Committee (MPC) decided to maintain the repo rate at 8.5% for the seventh consecutive time, despite a slight improvement in the inflation rate.
- Local asset classes enjoyed strong performances for the month, with local equities delivering return of +4.1%. Financials had a strong return of +5.2%, while Resources rebounded with a return of +5.7% following last month's negative return, notably highlighted by Gold Fields performance of +16.7%.
- Local property also ended the month with a robust performance of +4.4%. Local bonds delivered a +4.0% return as yields moved lower across the curve, driven by positive political developments and the growing possibility of lower interest rates in the second half of the year.
- The MSCI Emerging Markets Index recorded a return of +0.3% for the month, underperforming its developed market counterparts. This was primarily due to weak performances from China and Taiwan. The equity markets in South Korea and Taiwan saw declines, partly driven by a drop in semiconductor stocks, while China's market also fell amid uncertainty surrounding the Third Plenum.
- The MSCI World Index had a return of +1.8% for the month, outperforming its emerging market peers. In July, the US Federal Reserve concluded its policy meeting with a decision to keep its interest rate steady in the 5.25%-5.50% range. The Federal Reserve Chair Jerome Powell indicated that interest rates could be cut as soon as September if the U.S. economy performs as expected. In Japan, the Bank of Japan raised its key interest rate to 0.25% from a range of 0%-0.1%, also announcing plans to reduce bond purchases going forward. Meanwhile, the Bank of England has cut interest rates for the first time since the onset of the COVID-19 pandemic in early 2020, as inflationary pressures in the economy have eased.

## Glossary

### Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

### Maximum drawdown

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

### Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

### Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
