Rolling Window: 3 Years 1 Month shift

■ GTC Passive Market Plus ■ Composite Benchmark**

Investment mandate and objectives

The portfolio employs a rule based (passive) investment strategy. The objective of this portfolio is to outperform a full risk composite benchmark over a rolling 10-year period. This portfolio has been designed for maximum capital growth through a combination of local and offshore asset exposure. The portfolio's offshore exposure provides diversification, higher return potential and protects against local currency depreciation.

Features:

- Regulation 28 compliant
- Full equity exposure
- Local and international exposure
- Capital growth

Market summary

- Local equities, as measured by the JSE All Share SWIX index, ended the month up +1.3%, driven by the Financials (+5.7%) and Industrials (+4.0%) sectors as Mr Price, ABSA, MTN and Telkom saw gains. The local property sector rose by +8.3% this month, driven by continued strength in Growthpoint (+14.3%) and Redefine (+11.7%).
- The Resources sector came under pressure, detracting -9.7%, amid poor global metal demand impacting company earnings. Despite positive returns for Gold (+2.3% USD), the sell-off in Gold Fields pulled the broader SA Gold mining sector down over the month.
- South Africa's annual inflation rate eased to a three-year low of 4.6% (year-on-year to the end of July 2024), down from 5.1% the previous month and in-line with the central bank's target level of 4.5%. South Africa's unemployment rate increased to 33.5% at the end of the second quarter of 2024, up from 32.9% in the previous quarter.
- Local bonds (JSE ALBI) earned +2.4% over the month, well ahead of local cash (STEFI Composite) at +0.7% and in-line with offshore bonds (FTSE WGBI) which came in at +2.3% USD. Offshore bond's gain was offset by the +2.4% Rand strength against the US Dollar over the month.
- The MSCI Emerging Markets equity index gained +1.6% USD but lagged the developed market MSCI World Index which was up 2.6% USD. Remarks by US Federal Reserve, at the Jackson Hole conference, prompted markets to anticipate a higher probability of a larger interest rate cut in September adding to the risk-on sentiment.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
