Rolling Window: 3 Years 1 Month shift

■ GTC Passive One ■ CPI+1%

Investment mandate and objectives

The portfolio employs a rule based (passive) investment strategy. The GTC Passive One fund comprises of both local and international asset classes, with a low exposure to equities. The fund is Regulation 28 compliant and aims to outperform inflation plus 1% over rolling 3 year periods, with no negative rolling 12 month period. The portfolio has been designed for capital protection through reduced volatility.

The portfolio utilizes asset allocation and downside protection to deliver consistent positive returns through most market conditions. The portfolio has international exposure of between 15% and 20%, which offers diversification and a local currency hedge.

Features:

- Regulation 28 compliant
- Local and international exposure
- Multi-asset class exposure
- Capital preservation

Market summary

- Local equities, as measured by the JSE All Share SWIX index, ended the month up +1.3%, driven by the Financials (+5.7%) and Industrials (+4.0%) sectors as Mr Price, ABSA, MTN and Telkom saw gains. The local property sector rose by +8.3% this month, driven by continued strength in Growthpoint (+14.3%) and Redefine (+11.7%).
- The Resources sector came under pressure, detracting -9.7%, amid poor global metal demand impacting company earnings. Despite positive returns for Gold (+2.3% USD), the sell-off in Gold Fields pulled the broader SA Gold mining sector down over the month.
- South Africa's annual inflation rate eased to a three-year low of 4.6% (year-on-year to the end of July 2024), down from 5.1% the previous month and in-line with the central bank's target level of 4.5%. South Africa's unemployment rate increased to 33.5% at the end of the second quarter of 2024, up from 32.9% in the previous quarter.
- Local bonds (JSE ALBI) earned +2.4% over the month, well ahead of local cash (STEFI Composite) at +0.7% and in-line with offshore bonds (FTSE WGBI) which came in at +2.3% USD. Offshore bond's gain was offset by the +2.4% Rand strength against the US Dollar over the month.
- The MSCI Emerging Markets equity index gained +1.6% USD but lagged the developed market MSCI World Index which was up 2.6% USD. Remarks by US Federal Reserve, at the Jackson Hole conference, prompted markets to anticipate a higher probability of a larger interest rate cut in September adding to the risk-on sentiment.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
