

As of 30/09/2024

## Rolling returns (%)

Time Period: Since Common Inception (01/09/2015) to 30/09/2024

Rolling Window: 3 Years 1 Month shift

## Investment mandate and objectives

The objective of this portfolio is to outperform the CPI + 1% target over rolling 3 year periods with a reduced probability of negative returns over rolling 12-month periods. The portfolio has been designed for capital protection through reduced volatility. The portfolio has exposure to both local and offshore assets. The portfolio utilizes asset allocation and downside protection to deliver consistent positive returns through most market conditions.

**Features:**

- Regulation 28 compliant
- Local and international exposure
- Multi-asset class exposure
- Capital preservation

## Fund facts:

**Multi manager:** GTC  
**Benchmark:** CPI + 1% over 3 year rolling periods  
**Risk profile:** Low Risk

## Longest history cumulative performance (%)

## Market summary

- South African asset classes sold off early in September before rebounding to end the month in the green. Key factors driving performance over the month were South African Reserve Bank's (SARB) 25bps interest rate cut to +8%, improved domestic investor sentiment, and monetary stimulus out of China.
- Local equity markets ended the month up +4.0%, driven by performances from Resources (+3.7%) and Industrials (+5.2%) sectors. The local property sector continued its upward trend with a return +5.0% for the month.
- The local bonds delivered +3.9% for the month, outperforming the local cash which earned +0.7%.
- The MSCI Emerging Markets Index recorded +6.7% USD for the month lead by a significant rally in Chinese equities, up +23% USD. The MSCI World Index returned +1.8% for the month.
- In September, the US Federal Reserve exceeded market expectations by cutting interest rates by +0.5% to +5%, while the European Central Bank lowered its key deposit rate by +0.25% and the Bank of England held its key rate steady at +5%.
- As market volatility and economic uncertainty remain elevated, GTC remains cautiously optimistic in our portfolio positioning as we navigate through this market cycle.

## Glossary

### Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

### Maximum drawdown

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

### Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

### Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
