Time Period: 01/11/2017 to 31/10/2024

Rolling Window: 3 Years 1 Month shift

■ GTC Passive Market Plus ■ Composite Benchmark**

Investment mandate and objectives

The portfolio employs a rule based (passive) investment strategy. The objective of this portfolio is to outperform a full risk composite benchmark over a rolling 10-year period. This portfolio has been designed for maximum capital growth through a combination of local and offshore asset exposure. The portfolio's offshore exposure provides diversification, higher return potential and protects against local currency depreciation.

Features:

- Regulation 28 compliant
- Full equity exposure
- Local and international exposure
- Capital growth

| Worst | Local Property 1.9 | Local Property -34.5 | Global Bonds 2.5 | Global Emerging Markets -15.2 | Local Equity 7.9 | Global Bonds -4.5 |

Market summary

- Local equity markets ended its 7 month positive streak and ended the month down -0.9%, while Resources (+2.5%) have gained some ground over the month, Industrials (-2.8%), Listed Property (-2.8%) and Financials (-0.7%) pulled the overall market down.
- Local bonds delivered -2.2% for the month lagging local cash which earned +0.7%.
- South Africa's annual inflation eased for the fourth consecutive month in September to 3.8% from 4.4% in August, placing it at the lower end of the South African Reserve Bank's target range of 3% to 6%.
- The MSCI World Index shed 2.0% while the MSCI Emerging Markets Index contracted -4.5% USD as global sentiment shifted negative on the back of elevated geopolitical tension and uncertainty surrounding the outcomes of the US elections.
- The US Federal Reserve exceeded market expectations by cutting interest rates +0.5% to +5%, while the European Central Bank lowered its key deposit rate by +0.25% and the Bank of England held its key rate steady at +5%.
- Slowing inflation and economic momentum in Europe, with notable weakness in the manufacturing sector has prompted the European Central Bank to once again lower its interest rate by 25 basis points to 3.4%.
- As market volatility and economic uncertainty remain elevated, GTC remains cautiously optimistic in our portfolio positioning as we navigate through the cycle.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
