

As of 31/10/2024

## Rolling returns (%)

Time Period: Since Common Inception (01/09/2015) to 31/10/2024

Rolling Window: 3 Years 1 Month shift

## Investment mandate and objectives

This is a prudential fund that invests in other funds to provide investors with an opportunity to hold a wide range of underlying asset classes within the ethical parameters of Shari'ah governed investments.

Please note that none of the portfolios described above offer guaranteed investment returns and the member assumes the investment risk. The actual investment returns, positive or negative, are passed onto the member.

- Features:**
- Regulation 28 compliant
  - Shari'ah compliant
  - Capital growth
  - Capital preservation
  - Multi asset class
  - Local and international exposure

## Fund facts:

- Multi manager:** GTC
- Benchmark:** CPI + 3% over 5 year rolling periods
- Risk profile:** Moderate risk

## Longest history cumulative performance (%)

Time Period: Since Common Inception (01/09/2015) to 31/10/2024

## Calendar year returns (%)

As of Date: 31/10/2024

## Performance (%)

	7 Yr*	5 Yr*	3 Yr*	1 Yr
GTC Shari'ah	7.31	8.88	6.47	14.96
CPI+3%	8.01	8.13	8.63	6.97

\*Annualised

CPI is lagged by 1 month.

Returns are gross of all fees except for transaction, custody, and underlying manager performance fees.

Please note that past performance is not a guide to future performance and individual investment returns may differ as a result of the selected client access point and cash flows.

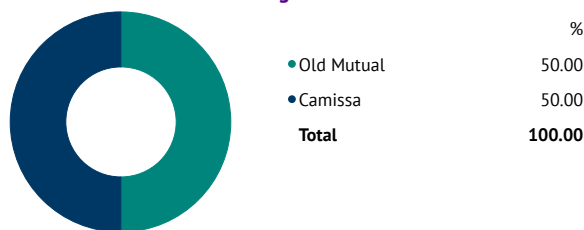

## Risk statistics: 5 years rolling (%)

	Global Bonds 2.9	Local Equity 0.6	Local Cash 3.8	Global Bonds -13.3	Local Cash 8.0	Local Cash 7.0
Worst	Local Property 1.9	Local Property -34.5	Global Bonds 2.5	Global Emerging Markets -15.2	Local Equity 7.9	Global Bonds -4.5

## Market summary

- Local equity markets ended its 7 month positive streak and ended the month down -0.9%, while Resources (+2.5%) have gained some ground over the month, Industrials (-2.8%), Listed Property (-2.8%) and Financials (-0.7%) pulled the overall market down.
- Local bonds delivered -2.2% for the month lagging local cash which earned +0.7%.
- South Africa's annual inflation eased for the fourth consecutive month in September to 3.8% from 4.4% in August, placing it at the lower end of the South African Reserve Bank's target range of 3% to 6%.
- The MSCI World Index shed 2.0% while the MSCI Emerging Markets Index contracted -4.5% USD as global sentiment shifted negative on the back of elevated geopolitical tension and uncertainty surrounding the outcomes of the US elections.
- The US Federal Reserve exceeded market expectations by cutting interest rates +0.5% to +5%, while the European Central Bank lowered its key deposit rate by +0.25% and the Bank of England held its key rate steady at +5%.
- Slowing inflation and economic momentum in Europe, with notable weakness in the manufacturing sector has prompted the European Central Bank to once again lower its interest rate by 25 basis points to 3.4%.
- As market volatility and economic uncertainty remain elevated, GTC remains cautiously optimistic in our portfolio positioning as we navigate through the cycle.

## Glossary

### Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

### Max drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

### Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

### Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
