Rolling returns (%)

Time Period: Since Common Inception (01/09/2015) to 30/11/2024

Rolling Window: 3 Years 1 Month shift

Investment mandate and objectives

The objective of this portfolio is to outperform the CPI + 1% target over rolling 3 year periods with a reduced probability of negative returns over rolling 12-month periods. The portfolio has been designed for capital protection through reduced volatility. The portfolio has exposure to both local and offshore assets. The portfolio utilizes asset allocation and downside protection to deliver consistent positive returns through most market conditions.

Features:

- Regulation 28 compliant
- Local and international exposure
- Multi-asset class exposure
- Capital preservation

Fund facts:

Multi manager: GTC
Benchmark: CPI + 1% over 3 year rolling periods
Risk profile: Low Risk

Longest history cumulative performance (%)

Market summary

- Local equity markets ended the month down -0.9%, driven by Resources (-6.8%) amid weak global trade expectations. Northam Platinum (-13.6%), Harmony Gold (-12.6%) and Gold Fields Ltd (-11.73%) each detracted over the month. Industrials (+0.5%), Listed Property (+1.7%) and Financials (+0.3%) were positive for the month.
- The local bonds delivered +3.1% as yields fell on global trends while local cash earned +0.7%.
- South Africa's annual inflation eased in October to 2.8% from 3.8% in September, placing it below the lower end of the South African Reserve Bank's target range of 3% to 6%. As expected, the South African Reserve Bank cut interest rates by another 25 basis points to 7.75%, although many hoped for a larger cut.
- The MSCI World Index gained +4.6% while driven almost entirely by US equities as Donald Trump emerged the victor of the US presidential elections. The MSCI Emerging Markets Index contracted -4.5% USD as global sentiment shifted negative on the back of elevated geopolitical tension and uncertainty as to a revival of Trump's trade war.
- The US Federal Reserve lowered interest rates by 25 basis points (bps) to 4.50% - 4.75% at its November meeting and the Bank of England lowered its rates 25bps to 4.75% as expected.
- As market volatility and economic uncertainty remain elevated, GTC remains cautiously optimistic in our portfolio positioning as we navigate through the cycle.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
