Rolling returns (%)

Time Period: 01/12/2017 to 30/11/2024

Rolling Window: 3 Years 1 Month shift

Investment mandate and objectives

The portfolio employs a rule based (passive) investment strategy. The GTC Passive One fund comprises of both local and international asset classes, with a low exposure to equities. The fund is Regulation 28 compliant and aims to outperform inflation plus 1% over rolling 3 year periods, with no negative rolling 12 month period. The portfolio has been designed for capital protection through reduced volatility.

The portfolio utilizes asset allocation and downside protection to deliver consistent positive returns through most market conditions. The portfolio has international exposure of between 15% and 20%, which offers diversification and a local currency hedge.

- Features:**
- Regulation 28 compliant
 - Local and international exposure
 - Multi-asset class exposure
 - Capital preservation

Fund facts:

- Multi manager:** GTC
- Benchmark:** CPI + 1% over 3 year rolling periods
- Risk profile:** Low Risk

Market summary

- Local equity markets ended the month down -0.9%, driven by Resources (-6.8%) amid weak global trade expectations. Northam Platinum (-13.6%), Harmony Gold (-12.6%) and Gold Fields Ltd (-11.73%) each detracted over the month. Industrials (+0.5%), Listed Property (+1.7%) and Financials (+0.3%) were positive for the month.
- The local bonds delivered +3.1% as yields fell on global trends while local cash earned +0.7%.
- South Africa's annual inflation eased in October to 2.8% from 3.8% in September, placing it below the lower end of the South African Reserve Bank's target range of 3% to 6%. As expected, the South African Reserve Bank cut interest rates by another 25 basis points to 7.75%, although many hoped for a larger cut.
- The MSCI World Index gained +4.6% while driven almost entirely by US equities as Donald Trump emerged the victor of the US presidential elections. The MSCI Emerging Markets Index contracted -4.5% USD as global sentiment shifted negative on the back of elevated geopolitical tension and uncertainty as to a revival of Trump's trade war.
- The US Federal Reserve lowered interest rates by 25 basis points (bps) to 4.50% - 4.75% at its November meeting and the Bank of England lowered its rates 25bps to 4.75% as expected.
- As market volatility and economic uncertainty remain elevated, GTC remains cautiously optimistic in our portfolio positioning as we navigate through the cycle.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
