

GTC Passive Market Plus

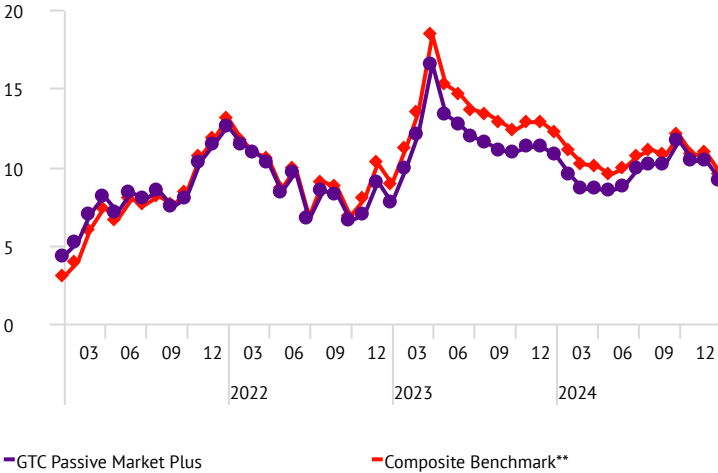

As of 31/12/2024

Rolling returns (%)

Time Period: 01/01/2018 to 31/12/2024

Rolling Window: 3 Years 1 Month shift

Investment mandate and objectives

The portfolio employs a rule based (passive) investment strategy. The objective of this portfolio is to outperform a full risk composite benchmark over a rolling 10-year period. This portfolio has been designed for maximum capital growth through a combination of local and offshore asset exposure. The portfolio's offshore exposure provides diversification, higher return potential and protects against local currency depreciation.

- Features:**
- Regulation 28 compliant
 - Full equity exposure
 - Local and international exposure
 - Capital growth

Market summary

- Local equity markets ended the month down -0.3%, driven primarily by a pull back in the Resources (-5.9%) and Financials (-1.4%) sectors. The weak performance in Resources was a result of declines from platinum and gold miners, including Impala Platinum (-14.0%), AngloGold Ashanti (-6.9%) and Harmony Gold (-8.7%). The Industrials sector earned +2.7%, contributed by gains in MTN (+14.0%) and Compagnie Financiere Richemont SA (+11.5%).
- The local property sector had a return +0.4% for the month, with its year to date return at +29.0% making it the best outperforming asset class for the year.
- The local bonds sector declined -0.4% for the month, as an upward movement in yields led to capital losses that outweighed accrued income. Local cash earned +0.7% over the month.
- The South African Chamber of Commerce and Industry (SACCI) Business Confidence Index (BCI) rose to 118.1 in November 2024, its highest level since October 2015, up from 114.2 in October.
- The MSCI Emerging Market equity Index lost -0.1% for the month while the MSCI World equity Index shed -2.6%.
- The U.S. Federal Reserve reduced interest rate by 25 basis points to 4.25%-4.50%. The Bank of England held its key interest rate steady at 4.75%, citing the need to maintain tight monetary conditions despite signs of a slowdown late in the year. The European Central Bank (ECB) announced its fourth interest rate cut taking the rate to 3.15%, reaffirming its commitment to further monetary easing.
- As market volatility and economic uncertainty remain elevated, GTC remains cautious in our portfolio positioning as we navigate through this market cycle.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
