Rolling returns (%)

Time Period: Since Common Inception (01/09/2015) to 31/01/2025

Rolling Window: 3 Years 1 Month shift

Investment mandate and objectives

The primary investment objective of the Fund is to obtain steady growth and maximum stability for capital invested. The portfolio will strive to provide investors with a minimum return in excess of inflation (CPI+3%) over a rolling 5 year period. The portfolio has exposure to both local and offshore assets.

Features:

- Regulation 28 compliant
- Local and international exposure
- Multi-asset class exposure
- Capital preservation

Fund facts:

Multi manager: GTC
 Benchmark: CPI + 3% over 5 year rolling periods
 Risk profile: Moderate Risk

Longest history cumulative performance (%)

Market summary

- The South African Reserve Bank (SARB) further reduced the repo rate by 25 basis points to 7.75%. The Governor of the SARB, Kganyago, confirmed that the MPC is also monitoring the potential impact of a global trade war amid rising tariff threats from newly elected U.S. President Donald Trump.
- Local equities ended the month with a return of +2.6%, driven by a +17.9% rally in the Resources sector on the back of Harmony Gold (+42.3%), Anglo Ashanti (+34.3%) and Kumba Iron Ore (+19.1%). Financials had a negative return of -2.7% affected by weakness in banking counters such as Capitec (-5.2%) and Investec Ltd (-4.9%). Industrials returned +0.53% with local property down -2.3%.
- The local bonds earned +0.44% despite facing pressures in the first half of January due to a shift in investor sentiment against emerging markets.
- The MSCI Emerging Markets Index delivered +1.8% USD for the month, lagging its developed market counterpart, the MSCI World Index, which returned +3.5% USD. Emerging markets faced pressure amid elevated geopolitical tensions as the Trump administration's announcement of tariffs on imports from Canada, Mexico, and China.
- As anticipated, the U.S. Federal Reserve maintained the Federal Funds rate at 4.5% during its January 2025 meeting. Fed Chair Jerome Powell emphasised that the central bank is in no hurry to cut rates further, choosing to rather pause and evaluate ongoing inflation progress. The European Central Bank (ECB) lowered its key interest rates by 0.25% in January 2025, as expected, reducing the deposit facility rate to 2.75%.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
