Market summary

- Local equity markets ended the month up +3.6%, driven primarily by a continued rally in the Resources sector which gained +20.9%. Key contributors came from Sibanye Stillwater (+47.9%), Impala Platinum (+42.9%), Harmony Gold (+47.9%) and AngloGold Ashanti (+30.5%). The Industrials sector was marginally off at -0.3% while the Financials sector was flat at +0.2%. Local property shed -0.9%, recording another negative month.
- Local cash ended the month up +0.6% ahead of the local bonds which returned +0.2%.
- In March, the South African Reserve Bank kept the repo rate unchanged at 7.50%. The Reserve Bank Governor Lesetja Kganyago indicated their wait and see stance as the global economy is experiencing extreme levels of uncertainty, with an unpredictable outlook.
- The MSCI Emerging Markets Index recorded +0.6% for the month ahead of the developed market counterpart. The Caixin China General Manufacturing PMI rose to 51.2 in March, indicating improved conditions in the manufacturing sector. A rise in investor sentiment was also seen in the month after China announced their "Special Action Plan to Boost Consumption", in a bid to stimulate domestic consumption.
- The MSCI World Index declined -4.5% USD for the month, a second consecutive monthly decline. US mega cap technology stocks were key detractors, as investors assessed their elevated valuations versus the market outlook. The Magnificent Seven collection of stocks, detracted -10.2% USD over the month.
- The resurgence of a tariff war has kept markets volatile and economic uncertainty elevated, GTC remains cautious in our portfolio positioning as we navigate through this market cycle.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
