Please note that past performance is not a guide to future performance and individual investment returns may differ as a result of the selected client access point and cash flows

Investment mandate and objectives

The objective of this portfolio is to outperform the CPI + 5% target over a rolling 7 year period. The portfolio has exposure to both local and offshore assets. This portfolio has been designed for capital growth through direct market exposure but with some limited downside protection.

Features:

- Regulation 28 compliant
- Multi-asset class exposure
- Local and International exposure

Fund facts:

Multi manager: GTC

Benchmark: CPI + 5% over a 7 year rolling period

Risk profile: Moderate to High Risk

Market summary

- South Africa's economy stagnated in the first quarter of 2025, recording a +0.1% GDP growth, as strong gains in agriculture were offset by contractions in mining, manufacturing, and utilities.
- Local equity markets ended the month with up +2.2%. The Resources sector led with a +4.8% gain. The Industrials sector rose +2.5%, supported by performances from Naspers (+6.8%) and MTN (+12.7%). The Financials sector rose +0.8%, while local property ended the month in negative territory at -0.9%.
- Local cash delivered a return of +0.6% for the month, while local bonds returned +2.3%.
- The MSCI Emerging Markets Index recorded +6.0% for the month ahead of the developed market counterpart. The People's Bank of China (PBoC) kept its key lending rate unchanged at a record low of 3.0% in June, in line with market expectations.
- The MSCI World Index gained +4.3% for the month. In the US, the Federal Reserve held the federal funds rate steady at 4.25%–4.50% for the fourth consecutive time in the June meeting. The Bank of England voted 6–3 to keep the Bank Rate unchanged at 4.25%, while the European Central Bank (ECB) opted to ease policy, cutting its key interest rate by 0.25% to 2.15%.
- As market volatility and economic uncertainty remain elevated, GTC remains cautious in our portfolio positioning as we navigate through this market cycle.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
