Glossary

Negotiable certificate of deposit

A financial instrument with a fixed interest rate that can be traded in the secondary market allowing investors to buy and sell the instrument to other investors before maturity.

Floating rate note

A financial instrument that has an interest rate that fluctuates based on a specified benchmark, adjusting periodically to reflect market conditions.

Credit linked note

A financial instrument backed by loans, enabling the issuer to transfer credit risk to the investors. In exchange for taking on this credit risk, investors receive higher interest payments compared to conventional bonds.

A financial instrument that allows investors to invest a specific amount of money at a fixed interest rate over a fixed duration.

Treasury Bill

A financial instrument issued by the government sold at a discount to the face value. The investor does not receive interest payments however the investor earns a profit at maturity which is the difference between purchase price and face value.

Market summary

- South Africa's economy stagnated in the first quarter of 2025, recording a +0.1% GDP growth, as strong gains in agriculture were offset by contractions in mining, manufacturing, and utilities.
- Local equity markets ended the month with up +2.2%. The Resources sector led with a +4.8% gain. The Industrials sector rose +2.5%, supported by performances from Naspers (+6.8%) and MTN (+12.7%). The Financials sector rose +0.8%, while local property ended the month in negative territory at -0.9%.
- Local cash delivered a return of +0.6% for the month, while local bonds returned +2.3%.
- The MSCI Emerging Markets Index recorded +6.0% for the month ahead of the developed market counterpart. The People's Bank of China (PBoC) kept its key lending rate unchanged at a record low of 3.0% in June, in line with market expectations.
- The MSCI World Index gained +4.3% for the month. In the US, the Federal Reserve held the federal funds rate steady at 4.25%–4.50% for the fourth consecutive time in the June meeting. The Bank of England voted 6–3 to keep the Bank Rate unchanged at 4.25%, while the European Central Bank (ECB) opted to ease policy, cutting its key interest rate by 0.25% to 2.15%.
- As market volatility and economic uncertainty remain elevated, GTC remains cautious in our portfolio positioning as we navigate through this market cycle.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
