Investment mandate and objectives

The portfolio employs a rule based (passive) investment strategy. The objective of this portfolio is to outperform a full risk composite benchmark over a rolling 10-year period. This portfolio has been designed for maximum capital growth through a combination of local and offshore asset exposure. The portfolio's offshore exposure provides diversification, higher return potential and protects against local currency depreciation.

Features:

- Regulation 28 compliant
- Full equity exposure
- Local and international exposure
- Capital growth

Market summary

- South Africa's economy stagnated in the first quarter of 2025, recording a +0.1% GDP growth, as strong gains in agriculture were offset by contractions in mining, manufacturing, and utilities.
- Local equity markets ended the month with up +2.2%. The Resources sector led with a +4.8% gain. The Industrials sector rose +2.5%, supported by performances from Naspers (+6.8%) and MTN (+12.7%). The Financials sector rose +0.8%, while local property ended the month in negative territory at -0.9%.
- Local cash delivered a return of +0.6% for the month, while local bonds returned +2.3%.
- The MSCI Emerging Markets Index recorded +6.0% for the month ahead of the developed market counterpart. The People's Bank of China (PBoC) kept its key lending rate unchanged at a record low of 3.0% in June, in line with market expectations.
- The MSCI World Index gained +4.3% for the month. In the US, the Federal Reserve held the federal funds rate steady at 4.25%–4.50% for the fourth consecutive time in the June meeting. The Bank of England voted 6–3 to keep the Bank Rate unchanged at 4.25%, while the European Central Bank (ECB) opted to ease policy, cutting its key interest rate by 0.25% to 2.15%.
- As market volatility and economic uncertainty remain elevated, GTC remains cautious in our portfolio positioning as we navigate through this market cycle.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
