Performance (%)

	7 Yr*	5 Yr*	3 Yr*	1 Yr
GTC Five	9.99	12.61	14.32	17.99
CPI+5%	9.81	10.20	9.35	8.55

*Annualised

CPI is lagged by 1 month.

Returns are gross of all fees except for transaction, custody, and underlying manager performance fees. Please note that past performance is not a guide to future performance and individual investment returns may differ as a result of the selected client access point and cash flows

Investment mandate and objectives

The objective of this portfolio is to outperform the CPI + 5% target over a rolling 7 year period. The portfolio has exposure to both local and offshore assets. This portfolio has been designed for capital growth through direct market exposure but with some limited downside protection.

Features:

- Regulation 28 compliant
- Multi-asset class exposure
- Local and International exposure

Fund facts:

Multi manager: GTC
Benchmark: CPI + 5% over a 7 year rolling period
Risk profile: Moderate to High Risk

Market summary

- Local equities ended the month up +3.5% supported by gains from the Resources sector. The Resources sector had a return of +12.0% driven by notable performances for Gold Fields Ltd (+31.5%) and AngloGold Ashanti Plc (+21.1%). While the Financials and Industrials sector returned +1.1% and +1.2% respectively. Local property gained +2.8% over the month.
- Local cash ended the month with a return of +0.6% slightly trailing local bonds, which returned +0.8%.
- The South African Reserve Bank (SARB) reduced its key interest rate by 0.75% to 7.0% in the eight months of 2025. The SARB stated that the cuts aim to support a slowing economy amid an improving inflation outlook.
- The MSCI Emerging Markets Index recorded a return of +1.3% USD for the month. Chinese equities gained, as sentiments shifted positive towards the US-China trade talks that allowed for another 90 day pause on tariffs. The People's Bank of China kept their key lending rates unchanged for the third consecutive month.
- The MSCI World Index had a return of +2.6% USD for the month outperforming its emerging market counterpart. The US Federal Reserve held its benchmark interest rate steady at 4.25%–4.50% for a fifth straight meeting in July. The Bank of England (BoE) cut interest rates by 75 basis points to 4.0% over the year thus far, despite inflation remaining above target at 3.8%. Meanwhile, the European Central Bank (ECB) cut 100 basis points in 2025.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
