Glossary

Negotiable certificate of deposit

A financial instrument with a fixed interest rate that can be traded in the secondary market allowing investors to buy and sell the instrument to other investors before maturity.

Floating rate note

A financial instrument that has an interest rate that fluctuates based on a specified benchmark, adjusting periodically to reflect market conditions.

Credit linked note

A financial instrument backed by loans, enabling the issuer to transfer credit risk to the investors. In exchange for taking on this credit risk, investors receive higher interest payments compared to conventional bonds.

Fixed deposit

A financial instrument that allows investors to invest a specific amount of money at a fixed interest rate over a fixed duration.

Treasury Bill

A financial instrument issued by the government sold at a discount to the face value. The investor does not receive interest payments however the investor earns a profit at maturity which is the difference between purchase price and face value.

Market summary

- South Africa's removal from the Financial Action Task Force (FATF) 'grey list' lifted investor sentiment and supported foreign inflows.
- Local equities ended the month up +1.8%. The Resources sector declined at -5.4% due to a pullback in precious metals pricing. The notable detractors were Impala Platinum (-15.5%) and Thungela Resources (-12.5%). Industrials gained +1.8% and Financials rose +8.4% supported by strong performance from Discovery (+11.6%). Local property had a strong return of +7.8%.
- Local cash ended the month with a return of +0.6% below local bonds, which returned +2.6%.
- The MSCI Emerging Markets Index earned +4.2% USD for the month outperforming its developed market counterpart. This was contributed by strong performance from Korea and Taiwan. The Korean market benefited from artificial intelligence (AI)-related technology demand, strength in industrials and the announcement of a new trade deal with the US. Taiwan continued to gain from ongoing investor demand for AI-related technology stocks.
- The MSCI World Index earned +2.0% USD for the month. The US Federal Reserve cut interest rates by 25 basis points to range of 3.75%-4% however, Federal Reserve Chair Jerome Powell cautioned against assuming that a rate cut is guaranteed at the next meeting. The European Central Bank (ECB) opted to keep its main policy rate unchanged at 2.00%.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
