As of 31/01/2026

Rolling returns (%)

Time Period: 01/02/2019 to 31/01/2026

Rolling Window: 3 Years 1 Month shift

Investment mandate and objectives

The portfolio employs a rule based (passive) investment strategy. The GTC Passive Five fund comprises of both local and international asset classes, with a maximum exposure of 75% to equities. The fund is Regulation 28 compliant and aims to outperform inflation plus 5% over rolling 7 year periods. International exposure is kept within regulatory limitation which offers diversification and a local currency hedge.

Features:

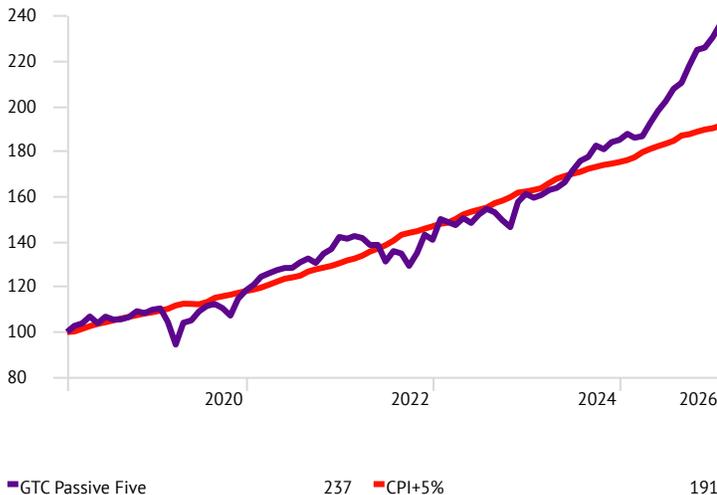

- Regulation 28 compliant
- Flexible Asset Allocation
- Local and International exposure
- Capital Growth

Market summary

- The South African Reserve Bank (SARB) kept the repo rate unchanged at 6.75%. The headline inflation at 3.6% remained slightly above the 3% target. The Governor of the Reserve Bank Lesetja Kganyago is adopting a wait and see approach and cited potential price pressures including electricity tariffs.
- Local equities ended the month up +3.9%. The Resources sector gained +13.2% due to strong performances from Gold Fields (+17.1%), Impala Platinum (+20.6%) and Sibanye Stillwater (+22.0%). The Industrials sector detracted -3.4% while the Financials sector gained +2.9% and listed property +1.0%.
- Local cash ended the month with a return of +0.6% below local bonds, which returned +2.0%.
- The MSCI Emerging Markets Index gained +8.9% USD for the month ahead of its developed market counterpart. Korea continues to be a notable performer, boosted by policy support and strong returns from some memory-related stocks.
- The MSCI World Index gained +2.2% USD for the month. At its January 2026 meeting, the Federal Reserve kept the federal funds rate unchanged with a range of 3.5% to 3.75%. This decision was in line with market expectations.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
