## Glossary

### Negotiable certificate of deposit

A financial instrument with a fixed interest rate that can be traded in the secondary market allowing investors to buy and sell the instrument to other investors before maturity.

### Floating rate note

A financial instrument that has an interest rate that fluctuates based on a specified benchmark, adjusting periodically to reflect market conditions.

### Credit linked note

A financial instrument backed by loans, enabling the issuer to transfer credit risk to the investors. In exchange for taking on this credit risk, investors receive higher interest payments compared to conventional bonds.

### Fixed deposit

A financial instrument that allows investors to invest a specific amount of money at a fixed interest rate over a fixed duration.

### Treasury Bill

A financial instrument issued by the government sold at a discount to the face value. The investor does not receive interest payments however the investor earns a profit at maturity which is the difference between purchase price and face value.

## Market summary

- The South African Reserve Bank (SARB) kept the repo rate unchanged at 6.75% in the March 2026 meeting given the high inflation risks from high energy prices and Middle Eastern conflict.
- Local equity markets contracted -10.6% over the month amid the global risk off environment following the start of the Gulf war. The Financials (-9.8%), Resources (-16.5%), Industrials (-5.2%) and listed property (-11.4%) sector each declined over the month.
- Local cash earned +0.6% for the month, while local bonds declined -6.9% as the yield curve shifted upward.
- The MSCI Emerging Markets Index contracted -13.1% USD lagging its developed market counterpart. The month of March reversed gains earned by South Korea and Taiwan earlier in 2026 amid concerns around high energy costs and supply chain disruptions. China's central bank kept its key lending rates unchanged for tenth consecutive month in March 2026 as anticipated by the investors.
- The MSCI World Index declined -6.4% USD for the month. In March 2026 the US Federal Reserve kept interest rates unchanged within a range of 3.5% to 3.75%. Energy stocks gained over the quarter as the producers, refiners and energy infrastructure companies all benefited from higher oil prices. The European Central Bank (ECB) kept their rates unchanged following its March 2026 meeting. The conflict in the Middle East has resulted in disrupted energy supply chains and contributed to price volatility across the globe.
- As market volatility and economic uncertainty remain elevated, GTC remains cautious in our portfolio positioning as we navigate through this market cycle.

## Glossary

### Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

### Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

### Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

### Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
