Glossary

Negotiable certificate of deposit

A financial instrument with a fixed interest rate that can be traded in the secondary market allowing investors to buy and sell the instrument to other investors before maturity.

Floating rate note

A financial instrument that has an interest rate that fluctuates based on a specified benchmark, adjusting periodically to reflect market conditions.

Credit linked note

A financial instrument backed by loans, enabling the issuer to transfer credit risk to the investors. In exchange for taking on this credit risk, investors receive higher interest payments compared to conventional bonds.

Fixed deposit

A financial instrument that allows investors to invest a specific amount of money at a fixed interest rate over a fixed duration.

Treasury Bill

A financial instrument issued by the government sold at a discount to the face value. The investor does not receive interest payments however the investor earns a profit at maturity which is the difference between purchase price and face value.

Market summary

- Elevated and volatile global oil prices amid ongoing geopolitical tensions in the Middle East continued to shape global investment markets in April 2026. The effects were negative for investor sentiment and the rand, while lifting fuel prices and future inflation expectations.
- Local equity markets gained +1.7% over the month with the Listed Property, Industrials and Financials sectors up by +5.4%, +3.2% and +4.3% respectively while the Resources sector was down -2.6%.
- Local cash earned +0.6% while local bonds gained +3.3%, stabilising after its sharp repricing in March 2026, although yields remained elevated as investors continued to demand higher risk premiums amid inflation concerns. Inflation for the month of March 2026 came in at +3.1% with the rate expected to increase further in the month of April 2026.
- The MSCI Emerging Markets equity index gained +14.7% USD in April 2026. This rebound was driven by Asian tech stocks - particularly semiconductor companies linked to the global AI investment cycle. The biggest contributors were Taiwan Semiconductor Manufacturing Company (TSMC), alongside Samsung Electronics and SK Hynix. These companies rallied on continued AI -related demand for advanced chips, memory, and data centre infrastructure.
- The MSCI World equity index gained +9.6% USD, with the rise attributed to a decisive rotation back into artificial intelligence stocks and a reduction in tail risks, despite ongoing geopolitical tension. The US Federal Reserve held interest rates at their target range of +3.5% to +3.75%, with the Bank of England (+3.75%), European Central Bank (+2.0%) and Bank of Japan (+0.75%) also keeping their respective interest rates on hold in April 2026.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
