

GTC Passive Market Plus

As of 31/05/2026

Rolling returns (%)

Time Period: 01/06/2019 to 31/05/2026

Rolling Window: 3 Years 1 Month shift

Investment mandate and objectives

The portfolio employs a rule based (passive) investment strategy. The objective of this portfolio is to outperform a full risk composite benchmark over a rolling 10-year period. This portfolio has been designed for maximum capital growth through a combination of local and offshore asset exposure. The portfolio's offshore exposure provides diversification, higher return potential and protects against local currency depreciation.

Features:

- Regulation 28 compliant
- Full equity exposure
- Local and international exposure
- Capital growth

Market summary

- Ongoing geopolitical tensions in the Middle East and AI euphoria continued to shape global investment markets in May 2026. Elevated energy prices continued to put upward pressure on global inflation expectations. In South Africa, inflation (CPI) for April came in at 4%. The South African Reserve Bank raised interest rates by 0.25% to a central repurchase rate of 7% after its May meeting and indicated that additional policy tightening may be needed to contain inflation risks.
- Local Equity Markets were mostly flat, returning -0.27% over the month. The Industrials and Resources sector detracted -0.66% and -1.39%, respectively, whilst the Financials sector and Listed Property sector added +1.09% and +0.62%, respectively, over the month.
- Local Cash earned +0.56% while Local Bonds gained +2.91%. The local bond market showed resilience in May driven by improved fiscal discipline, attractive yields and renewed investor demand for emerging market debt.
- The MSCI Emerging Market Equity Index gained +9.69% USD in May. Performance was driven by gains in select tech stocks, particularly companies linked to the global AI investment cycle. The rally in the index highlights the increasing concentration of a small number of large cap technology companies, particularly in Taiwan and South Korea.
- The MSCI World Equity Index gained +4.55% USD in May. Performance was led by US equities, particularly companies benefiting from the AI investment cycle. Inflation in developed economies continued to rise. The United States, Euro Area and the United Kingdom recorded inflation for the month of April of 3.8%, 3.0% and 2.8%, respectively.
- The South African Rand strengthened +3.01% over the month relative to the US Dollar.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
