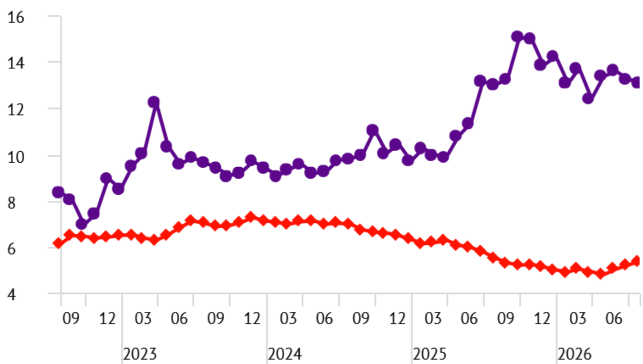
Rolling returns (%)

Time Period: 01/08/2019 to 31/07/2026

Rolling Window: 3 Years 1 Month shift



Investment mandate and objectives

The portfolio employs a rule based (passive) investment strategy.
The GTC Passive One fund comprises of both local and international asset classes, with a low exposure to equities. The fund is Regulation 28 compliant and aims to outperform inflation plus 1% over rolling 3 year periods, with no negative rolling 12 month period. The portfolio has been designed for capital protection through reduced volatility.

The portfolio utilizes asset allocation and downside protection to deliver consistent positive returns through most market conditions. The portfolio has international exposure of between 15% and 20%, which offers diversification and a local currency hedge.

Features:

- Regulation 28 compliant
- Local and international exposure
- Multi-asset class exposure
- Capital preservation

Market summary

- Global markets in July 2026 were influenced by the ongoing Middle East conflict and rotation away from the AI-related trade. Renewed US-Iran hostilities and instability around the ceasefire continued to influence global oil prices. At the same time, investors reassessed global technology and semiconductor exposures amid concerns around AI-related capital expenditure and market concentration risk.
- The South African Reserve Bank (SARB) kept interest rates unchanged at 7%, contrary to expectations for a 25-basis-point increase. In its monetary policy statement, the SARB noted downside risks to growth and upside risks to inflation, indicating that inflation is expected to remain above 4% until early next year. Headline inflation for June was recorded at 5%, which is above the SARB's target of 3%.
- South African equities advanced +1.2% during July 2026, supported by a rebound in commodity prices that benefitted energy and mining counters. Industrials, Resources, Financials and Listed Property returned +0.3%, +2.2%, +1.8% and +2.3%, respectively.
- Local cash delivered a return of +0.6%, while local bonds declined by -1.4% in July 2026. Bond market weakness was driven by the SARB's interest-rate decision and the SA inflation outlook, which contributed to a sell-off in longer-dated bonds.
- The MSCI World Index gained +0.5% USD, as strength in European equities offset weakness across US technology and AI-linked stocks.
- The MSCI Emerging Markets Index declined by -3.1% USD, weighed down by continued weakness in Korean and Taiwanese semiconductor and technology shares.
- The Rand weakened by 1.0% against the US dollar in July 2026, as the SARB's decision to keep rates unchanged reduced the currency's relative yield appeal.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
