Rolling Window: 3 Years 1 Month shift

Longest history cumulative performance (%)

Time Period: Since Common Inception (01/09/2015) to 31/07/2026

Performance (%)

	7 Yr*	5 Yr*	3 Yr*	1 Yr
GTC Three	10.58	10.47	12.38	11.48
CPI+3%	7.87	8.22	7.42	8.01

*Annualised

CPI is lagged by 1 month.

Returns are gross of all fees except for transaction, custody, and underlying manager performance fees. Please note that past performance is not a guide to future performance and individual investment returns may differ as a result of the selected client access point and cash flows.

Investment mandate and objectives

The primary investment objective of the Fund is to obtain steady growth and maximum stability for capital invested. The portfolio will strive to provide investors with a minimum return in excess of inflation (CPI+3%) over a rolling 5 year period. The portfolio has exposure to both local and offshore assets.

Features:

Regulation 28 compliant
Local and international exposure
Multi-asset class exposure
Capital preservation

Fund facts:

Multi manager: GTC
Benchmark: CPI + 3% over 5 year rolling periods
Risk profile: Moderate Risk

Market summary

- Global markets in July 2026 were influenced by the ongoing Middle East conflict and rotation away from the AI-related trade. Renewed US-Iran hostilities and instability around the ceasefire continued to influence global oil prices. At the same time, investors reassessed global technology and semiconductor exposures amid concerns around AI-related capital expenditure and market concentration risk.
- The South African Reserve Bank (SARB) kept interest rates unchanged at 7%, contrary to expectations for a 25-basis-point increase. In its monetary policy statement, the SARB noted downside risks to growth and upside risks to inflation, indicating that inflation is expected to remain above 4% until early next year. Headline inflation for June was recorded at 5%, which is above the SARB's target of 3%.
- South African equities advanced +1.2% during July 2026, supported by a rebound in commodity prices that benefitted energy and mining counters. Industrials, Resources, Financials and Listed Property returned +0.3%, +2.2%, +1.8% and +2.3%, respectively.
- Local cash delivered a return of +0.6%, while local bonds declined by -1.4% in July 2026. Bond market weakness was driven by the SARB's interest-rate decision and the SA inflation outlook, which contributed to a sell-off in longer-dated bonds.
- The MSCI World Index gained +0.5% USD, as strength in European equities offset weakness across US technology and AI-linked stocks.
- The MSCI Emerging Markets Index declined by -3.1% USD, weighed down by continued weakness in Korean and Taiwanese semiconductor and technology shares.
- The Rand weakened by 1.0% against the US dollar in July 2026, as the SARB's decision to keep rates unchanged reduced the currency's relative yield appeal.

Glossary

Standard deviation

- Is a measure that is used to quantify the amount of variation or dispersion of a set of data values around the mean value. This measure is commonly known as volatility and referenced as an explicit measure of risk.

Maximum drawdown

- Is the maximum loss from a peak to a trough of a portfolio before a new peak is attained. Maximum Drawdown is an indicator of downside risk over a specified time period.

Sharpe ratio

- Is a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations. The Sharpe ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk. In other words, it measures how much excess return a portfolio has earned in relation to the level of risk it is exposure to. The higher the ratio the stronger the risk adjusted return.

Calmar ratio

- Is a measure for calculating risk-adjusted return. It is the average return earned per unit of capital loss risk taken in the form of maximum drawdown over a given period.
